

**The Chemical Company** 

## **Coupling Agent**

## KH-602 Silane coupling agent

| KH-602 Silane coupling agent |   |  |  |
|------------------------------|---|--|--|
| FEATURE                      | <ul> <li>Avoid using primer bonding process</li> <li>Good stability in the water-borne systems</li> <li>It provides better adhesion to the substrate</li> <li>Can extend the shelf life and stability of the resin</li> <li>Moisture can reduce the absorption of the composite mold</li> <li>The modified system is light in color, no bubbles after curing</li> <li>Improves wet electrical properties, especially at low frequencies</li> <li>Can improve the adhesion to the metal substrate to increase strength</li> <li>Make textiles soft, smooth, breathable, waterproof and more flexible</li> <li>The fabric has excellent softness, smoothness and other finishing effects</li> <li>Improve the adhesion while maintaining the elongation at break of rubber to improve the shelf life of the formulation</li> <li>Can significantly increase the strength of the friction material, long life, easy to sand collapse</li> <li>Resin can achieve internal damage rather than the interfacial</li> </ul> |  |  |
|                              |   |  |  |

**TYPE** 

N-β- aminoethyl -γ- aminopropyl methyl dimethoxy silane

adhesion between the sealant layer and the substrate damage

## **COUPLING AGENT**

## **The Chemical Company**

| TYPICAL PROPERTIES | Appearance:  | Colorless to pale yellow liquid  |  |
|--------------------|--|--|--|
|                    | Content:   | ≥97%   |  |
|                    | Flash point:   | 93℃  |  |
|                    | <b>Boiling point:</b>  | 256℃   |  |
|                    | Molecular weight:  | 206  |  |
|                    | CAS No.:   | 3069-29-2  |  |
|                    | <b>Density:</b>  | 0.965-0.975g/cm <sup>3</sup>   |  |
|                    | Refractive index:  | 1.430 ± 0.020  |  |
|                    | Structural formula:  | NH2(CH2)2NH(CH2)3SiCH3(OCH3)2  |  |
|                    | Recommended  | 1% by weight of filler   |  |
|                    | Consumption  |  |  |
|                    | Solubility:  | Dissolved in benzene, ethanol, propanol                                  |  |
|                    |  | and other organic solvents, can be dissolved in water to produce an oily |  |
|                    |  | liquid after hydrolysis fused after                                      |  |
|                    |  | placement  |  |
|                    | Textile industry   |  |  |
|                    | <ul> <li>Plastisol sealant</li> </ul>  |  |  |
|                    | • Foundry Industry   |  |  |
| APPLICATION        | <ul> <li>Polysulfide sealant(for glass, aluminum and steel)</li> </ul>       |  |  |
|                    | <ul> <li>Added to the phenolic resin and epoxy molding compound</li> </ul>   |  |  |
|                    | <ul> <li>Suitable resins include furan resins, phenol resins, RTV</li> </ul> |  |  |
|                    | resins, trimer nitrile amine, D4, DMC, PA, PU, etc.                          |  |  |
|                    | Available in 25 kg/drum  |  |  |
| STORAGE AND        | • Store products in tightly closed original containers at 5-40°C             |  |  |
| HANDLING           | • Shelf life: 12 months from delivery date                                   |  |  |
|                    | <ul> <li>According to non-</li> </ul>  | -dangerous goods transport   |  |
